

## **Requests For Quotation – Security Gates**

July 11, 2011

American Embassy Nicosia is seeking a contractor with electrical, mechanical and controls expertise and experience to remove the existing drive mechanisms from four like perimeter security gates and replace the drive motors with local 3 phase 415 volt properly sized in horse power drive motors with appropriate controls to activate the security gates from a remote location inside the guard houses located near to the gates. Bear in mind that these gates are heavy use gates and the new drive and controls systems must be capable of high daily use over a long time frame. The existing systems have lasted more than twenty years and the expectation for the replacement system to last a similar period or longer. The replacement system must come with a long term guarantee. The successful contractor must use a product with ready available spares parts within the City of Nicosia.

In addition to the drive motors and controls the drive system must remove then wheels driving the gates and replace them a heavy duty chain and sprocket (Gear drive) Interested contractors will be invited to an onsite visit to determine how to proceed with the project and to help the offering contractors develop pricing for the project. It will be the same operating system applied on each of four gates.

Interested companies should contact the Procurement Office by e-mail to [NicosiaContracting@state.gov](mailto:NicosiaContracting@state.gov), tel: 22-393381 or send a fax to 22-393933 requesting additional information.
