

Can you design and build this?

You could if you went to Dartmouth's Design It! Build It! Summer Engineering Workshop!

"Are you curious about engineering? Interested in taking an interdisciplinary approach to engineering? Would you like to combine your interests in art and engineering? Or music and engineering? Or energy and engineering? Do you like building and making things? If you responded 'yes' to any of these questions, then the Design It! Build It! Workshop might be for you."

The workshop is already fully booked but we have two spots reserved, and one is for **YOU**.

The U.S. Embassy, Finland's Youth Spark and Dartmouth University is on the lookout for two talented, upper secondary students to travel to the United States to participate in the workshop this summer – all expenses paid! In one page (maximum) tell us why we should pick you for the Design It! Build It! Engineering Workshop. Don't delay! **Send your submission to usembassyhelsinki@gmail.com by June 5.** You don't want to miss this incredible opportunity!

- Be 16-17 years old and enrolled in upper secondary school.
- Be able to participate in the full workshop, July 12 to July 25.
- Be fluent in English (since the workshop will be conducted in English).
- Be creative and willing to have fun!

For more information about the workshop check out:
