All workstations, as specified in A-C above, shall meet the following requirements:

1. Workstation designs shall take into account ergonomic scientific research results. The furniture shall be designed to facilitate task performance, and minimize fatigue and injury by taking into account size and range of motion by the user. All desks must have curved inside edges.
2. Workstations shall be designed and installed to maximize the use and fit into the existing field conditions, always maintaining a minimum of 48 inches in walkway space throughout the site. Consideration will be given on how each design maximizes the work space and fits their workstations to these existing site conditions. The Consular section has perimeter walls that are slightly curved, have column protrusions, and have free-standing columns which must be factored into the design.
3. Correct work station height shall be approximately 29-1/2" high depending upon the chair and other factors that interact with the user and table. The ideal is for the user to be able to sit at the work station with the keyboard in place and be able to easily maintain a 90-100 degree elbow angle and straight wrists while keying. The work surface shall be fabricated from particleboard or medium density fiberboard (MDF). Particleboard or MDF shall be minimum one-inch thickness, sealed and with laminate on top and bottom, having a minimum density of 600kg/m³.
4. The work station top should be big enough to allow space not only for all computer-related necessary equipment, but also for paperwork, books, and other materials needed while working at the computer. Working with materials on chairs and at odd angles has the potential for neck and other body strain. All work surfaces shall have a depth of at least 30 inches. The workstation shall be equipped with passes needed to maximize good wire/cable management.
5. Leg room: Knee spaces should allow a worker to feel uncrowded and to allow some changes of position even with the keyboard support lowered to the correct level for use. The knee space should be at least 30" wide by 19" deep by 27" high to comply with the requirements of the Americans with Disabilities Act. Drawers and support legs (for furniture) should not go where human legs need to fit.
6. Modular partitions shall measure 1.35 meters high and shall be placed in two locations:
 - 1) between the desks and the exterior wall on all desks abutting the exterior wall and
 - 2) between the desks and the interview windows on all desks located along the columns. No partitions shall be placed between desks so that an open, common work surface is maintained.
7. Partitions shall be capable of allowing electrical and communication cabling pass through them. Partitions shall be a minimum of 2-1/4" thick.
8. Workstation shall be equipped with a minimum of four (4) drawers and two (2) file drawers. Drawer cabinets maybe made of metal or using the same quality of fiberboard as that used for the desk countertop.
9. Contractor shall provide 3D drawing rendering of items A through C as identified above. Additionally, based on the ACAD drawing of the area to scale provided by the Government to the contractor as a conceptual design for bidding purposes only, the Contractor shall submit shop drawings of the layout identifying how all required workstations maximize use of current space and will be installed. After being awarded the contract, the Contractor shall be responsible for taking field
