

I protect embassies
and consulates worldwide.

This is my life trip.

I've made friendships
throughout West Africa.

I've established my foundation for
future leadership positions.

As a security engineer, I protect systems and
information from security threats.

Chimere, Foreign Service Specialist, Security Engineering Officer

Growing up in a small town in South Carolina, I always had big dreams of becoming an engineer but never expected my journey to take me to one of the world's leading foreign affairs agencies, the U.S. Department of State. Today, I am a Foreign Service Specialist charged with protecting U.S. embassies and consulates worldwide. My journey began in Dakar, Senegal, where I replaced the Security Engineering Officer who recruited me. I oversaw eight employees and provided technical security support and advice to seven other U.S. embassies in West Africa. Today, I am focusing on technical security policy, working from the nation's capitol, Washington, D.C. Best of all, my career allows me to use my leadership skills and ability to solve problems relating to a variety of security systems.

U.S. citizenship is required. An equal opportunity employer.
