INSTALLATION

General:

Installation includes setting in place, fastening to walls, floors, ceilings, counters, or other

structures where required, interconnecting wiring of the system components, equipment alignment and adjustment, and all other work whether or not expressly required herein which is necessary to result in complete operational systems.

Installation shall be in accordance with, but not limited to, these specifications.

Physical Installation:

Firmly secure equipment in place unless requirements of portability dictate otherwise.

Provide adequate fastenings and support to support load from system with a safety factor of at least three times total load.

Secure boxes, equipment, and similar components plumb and square.

Consider operational efficiency and overall aesthetic factors in the installation of equipment and cable.

Cable Installation:

Mark cables, regardless of length, with wrap around number or letter cable markers at both ends. There shall be no unmarked cables at any place in the system. Marking codes used on cables shall correspond to codes shown on drawings and or wire run sheets.

Neatly strap, dress, and adequately support inter-rack cabling.

Furnish terminal blocks, boards, strips, or connectors for cables that interface with racks, cabinets, consoles, or equipment modules. Do not run audio cables directly to the audio patch panel jacks. Furnish audio patch panel with an audio terminal block; terminate audio cables to and from the audio patch panel on this block.

Group cables according to the signals being carried. To reduce signal contamination, form separate groups for the following cables:

Power cables

Control, data cables

Audio cables carrying signals less than 20 dBm

Audio cables carrying signals between 20 dBm and +20 dBm

Audio cables carrying signals above +20 dBm

Do not allow audio cables to run in the same raceway as video, computer video or power cables.

As a general practice, run power cables, control cables, and high level cables on the left side of an equipment rack as viewed from the rear. Run other cables on the right side of an equipment rack, as viewed from the rear.

Cut cables to the length dictated by the run. Splices in pull boxes are not permitted without prior permission of COR. For equipment mounted in drawers or on slides, provide interconnecting cables with a service loop of appropriate length.

No cable with a bend radius less than that recommended by the cable subcontractor.

Connection Plate Receptacles:

Unless otherwise detailed herein, use the following types of panel receptacles on connection boxes, panels, plates, and wire ways:

Audio (microphone or line level) XLR3 type

Loudspeakers (70 Volt or Low Impedance) - Neutrik "Speakon" type

Cable Types:

Unless otherwise called for in these specifications, use the following cables or their approved equivalents in these systems:

- Type 1: Canare L-4E5AT Audio: MIC/Line
- Type 2: Belden 8477 Audio: For 16 & 8 □ program speake
- Type 3: Belden 8471 Audio: 70 V ceiling speakers
- Type 4: Canare MR202-**AT ** Pair audio multicore

Cut cables to the length dictated by the run, except video and pulse cables, which may need to be cut to an electrical length. Do not splice in pull boxes without prior permission of COR. For equipment mounted in drawers or on slides, provide interconnecting cables with a service loop of appropriate length.

GROUNDING

Procedures: To minimize problems resulting from improper grounding and to achieve maximum signal to noise ratios, adhere to the following grounding procedures:

General: Because of the great number of possible variations in grounding systems, it is the responsibility of the Contractor, to follow the practices below, and to deviate from these practices only when necessary to minimize cross talk and to maximize signal to noise ratios in the audio, video, and control systems.

System Grounds: Establish a single primary “system ground” for the systems in each particular area. Connect grounding conductors in that area to this primary system ground.

Provide the system ground in the audio equipment rack for the area consisting of a copper bar of sufficient size to accommodate secondary ground conductors. Connect the primary system ground bar to the nearest metallic electrical conduit of at least 50 mm in diameter using a copper conductor installed in a raceway, having a maximum of 0.1 □ total resistance.

The Contractor is responsible for determining if the metallic conduit is properly electrically bonded to the building ground system.

Provide secondary system grounding conductors from all racks, audio consoles, and ungrounded audio equipment in each area to the primary system grounding point for the area. Each of these grounding conductors shall have a maximum of 0.1 □ total resistance.

Do not use the AC neutral conductor, either in the power panel or in a receptacle outlet, be used for a system ground; there are no exceptions.

Audio Cable Shields: Ground audio cable shields at one point only; there are no exceptions. For inter and intra rack wiring, the shield be connected at one end only. For ungrounded portable equipment, such as microphones, connect the shield at both ends but grounded at only one end.

General: Because of the great number of possible variations in grounding systems, it shall be the responsibility of the Contractor, to follow good engineering practice, as outlined above, and to deviate from these practices only when necessary to minimize cross talk and to maximize signal to noise ratios in the audio, video, and control systems.

After Sales Service:

SYSTEM PROGRAMMING

Installation, commissioning and training of users on site
Availability of local agent either in Portugal or within European region
Product data sheet and related operating and servicing manuals in English

Programming: Fully brief COR on available programming options. Record COR's decisions and set up initial system program. Prepare a written record of decisions, implementation methodology, and final results.

6. INSURANCE

Contractor must carry the minimum liability insurance required by Portugal law.

7. WARRANTY

The warranty shall be valid for 12 months after the final inspection and acceptance. During the warranty period, the Contractor shall repair or replace, free of charge, any occurring defects or ensuing damages. If the Contractor fails to do so after receipt of a written request to that effect, the Government may have such discrepancies remedied at the Contractor's expense.

- (1) o Are, o are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency;
- (2) o Have, o have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a Federal, state or local government contract or subcontract; violation

of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, violating Federal criminal tax laws, or receiving stolen property;

(4) o Have, o have not, within a three-year period preceding this offer, been notified of any delinquent Federal taxes in an amount that exceeds \$3,000 for which the liability remains unsatisfied.

(i) Taxes are considered delinquent if both of the following criteria apply:

(A) *The tax liability is finally determined.* The liability is finally determined if it has been assessed. A liability is not finally determined if there is a pending administrative or judicial challenge. In the case of a judicial challenge to the liability, the liability is not finally determined until all judicial appeal rights have been exhausted.

(B) *The taxpayer is delinquent in making payment.* A taxpayer is delinquent if the taxpayer has failed to pay the tax liability when full payment was due and required. A taxpayer is not delinquent in cases where enforced collection action is precluded.

(ii) *Examples.*

(A) The taxpayer has received a statutory notice of deficiency, under I.R.C. §6212, which entitles the taxpayer to seek Tax Court review of a proposed tax deficiency. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek Tax Court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(B) The IRS has filed a notice of Federal tax lien with respect to an assessed tax liability, and the taxpayer has been issued a notice under I.R.C. §6320 entitling the taxpayer to request a hearing with the IRS Office of Appeals contesting the lien filing, and to further appeal to the Tax Court if the IRS determines to sustain the lien filing. In the course of the hearing, the taxpayer is entitled to contest the underlying tax liability because the taxpayer has had no prior opportunity to contest the liability. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek tax court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(C) The taxpayer has entered into an installment agreement pursuant to I.R.C. §6159. The taxpayer is making timely payments and is in full compliance with the agreement terms. The taxpayer is not delinquent because the taxpayer is not currently required to make full payment.

(D) The taxpayer has filed for bankruptcy protection. The taxpayer is not delinquent because enforced collection action is stayed under 11 U.S.C. §362 (the Bankruptcy Code).

(i) Certification Regarding Knowledge of Child Labor for *Listed End Products* (Executive Order 13126). [The Contracting Officer must list in paragraph (i)(1)

(k) *Certificates regarding exemptions from the application of the Service Contract Labor Standards*(Certification by the offeror as to its compliance with respect to the contract also constitutes its certification as to compliance by its subcontractor if it subcontracts out the exempt services.) *[The contracting officer is to check a box to indicate if paragraph (k)(1) or (k)(2) applies.]*

[] (1) Maintenance, calibration, or repair of certain equipment as described in FAR 22.1003-4(c)(1). The offeror o does o does not certify that—
