The drawings must show proposed layout and anchorage of equipment and appurtenances, their proposed relationship to relevant parts of the work, including existing elements, foundations and clearances for maintenance and operation. Capacity rating and active operating hours achieved by the products along with product data sheets. The gates are required to operate at least 60 times an hour. These documents shall provide the necessary interfaces, coordination, and communication among the Embassy, Overseas Buildings Operations (OBO) and the Contractor for the delivery of the completed project.

All Labor required for the satisfactory completion of the project shall be considered to be included and accounted for by the contractor.

3.5 General work for providing and installing two electronic sliding gates.

The general work required is outline below and is not limited to the following:

- a. Requirement for two heavy duty independently operable sliding gates running on 220/230V 3 PHz. 60Hz. Heavy site Traffic conditions where sliding gates will open and close constantly (at least 60 times per hour).
- b. Sliding gates shall be self-locking in the closed position to avoid unauthorized persons to manually operate/open the Sliding Gates.
- c. The sliding gates are required to operate at least 60 times an hour and have an operational weight to be considered at least 1000 Kg per gate but this could vary based on the designs proposed by each contractor note that the gate needs to be robust in its design even if it is less than 1000kg in weight. The lighter the weight the better the operation but this should not be the goal and should not undermine

the integrity/strength of the sliding gate. Each gate should have a travel rate of not less than 1ft per second or 0.3 meter/sec.

- d. The operating unit (Came BY3500 or equivalent) for the sliding gate shall be designed/selected to be able to support at least 50% extra weight of the sliding gate to produce a robust system that has a good life expectancy and very long service intervals. The contractor shall provide two sets of spare parts and their running gear for the operators and the sliding gates. The gates shall of state of the art controllers and safety elements where ever possible laser leading edge and limit switches rather than conventional micro switches activated by physical accessories installed upon the gate.
- e. Sliding gate will reverse back/stop in place when they meet any obstacle in its movement during operation and have a rubber finish leading edge. This feature should be able to be turned off when needed. Each Sliding gate must be controlled by a single remote (five remotes must be provided), the frequency on the two gates remotes should be far spread enough to accommodate the two gates and their additional remotes. These remotes should not clash with the existing remotes frequency already in use at the embassy. They should and also have a fixed control installed into the existing location at our control booth.
- f. There should be a surface fixed guide rail/runner that will allow for the sliding gates to run smoothly and may also provide space that will carry control and power cabling across the street and provide a visual and physical break point. Note that the guide rail/runner shall be of sufficient strength and design to support the gates and their accessories without needing replacement before the life of the sliding gate. The contractor will also ensure that all rollers and top rails that stabilize the sliding gate have stainless steel bearings that reduce friction and are installed in such a manner that they can be easily serviceable and replaced without the need for welding. All the ancillaries and accessories should be bolted and not welded to ensure ease of access and servicing.
- g. There must be a warranty for the product of at least one year from commissioning and there should be at least 4 years of optional PM and maintenance quotation supplied by the contractor if he offers this service.
- h. The contractor shall ensure that the units provided (especially the operators and rollers) are capable of being serviceable for at least 5 years i.e. that there are spare parts available for the units provided by the contractor to the embassy for that period and have proof that the provided equipment is capable of being serviced for the period required.
- i. Electric will be supplied by the embassy from existing and adjacent locations. It will be the contractor's responsibility to provide and meet NEC codes and have adequate isolation and protection on the power supply to the equipment.

- j. The gates shall be designed as anti-climb gates and should have some form of spikes on the top main rail of the gate that would deter would be climbers. All metal parts should be powder coated or epoxy painted after rust has been removed from the steel surface. The color should be black and the leading edges of the gates should have reflective yellow and black striped tape applied to them so that they are visible during the night.
- k. Each gate shall be at least as tall as the existing concrete boundary wall and the spicks should make the gate taller than the wall by at least 300mm the gate should not be taller than 3.3 m in total from the finished street level. Each gate needs to travel at least 3.5m to reach the central position of the drive. The gates should be designed to be supported at the top to increase robustness/strength of the gate and to ensure that the gate follows the path of the bottom floor/street guide rail/runner, but all the weight would be transmitted vertically down to the bottom floor/street guide rail/runner.
- l. Where ever necessary the contractor shall ensure that the gates do not trap anyone between them and adjacent elements. This will require removable safety covers robust enough to ensure that no harm comes to any individuals. Looking at the gate from inside of the embassy this condition occurs on both of the sliding gates.
- m. The contractor will need to excavate and create a retaining wall to hold the side of excavation, to create a flat running area/space for the sliding gate to slide back into and to create adequate space for the operator also. This will occur on the only on the right hand side sliding gate when viewed from inside of the embassy. The depth of excavation or raised area to the RHS is not greater than 1.0m and the ground was original disturbed when the perimeter boundary wall was installed. The contractor shall ensure that there is adequate drainage in this area or that the area created easily allows flow of rain/washing water out towards the street without flooding into the embassy side.
- n. The contractor can propose any method that will not detract from the esthetics of the building for the design of the gates themselves. It would be preferable to try to maintain the look of the existing gates as this would most likely be the best robust design. Please note that there should be the least disruption and alteration of the existing boundary wall where ever possible.
- o. The existing gate shall be removed and close to the date of commissioning of the new gates and should be transported to the GSO annex. The gate should be removed completely and without actually damaging the property in any way. The contractor needs to ensure that there is no disruption to the functioning of the embassy during the construction period of the project. **NOTE NO WORK SHOULD BE CARRIED OUT WITHOUT FIRST HAVING THE APPROPRIATE APPROVALS FROM THE ASSIGNED COR ON THIS PROJECT.** All the materials shall be approved and samples shall be provided to the COR to approve and retain for all elements that need materials approval.

p. Installation will be under guidance of Embassy staff and the assigned COR.

3.6 Site Cleaning:

Clean area of work at the end of each day as long as they do not affect the next day progress. Note that the site shall always be kept clean and clear of obstructions and that all vehicular and pedestrian traffic should not be impeded during the works.

4. CONTRACT ADMINISTRATION

(1) o Are, o are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency;

(2) o Have, o have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a Federal, state or local government contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, violating Federal criminal tax laws, or receiving stolen property;

(3) o Are, o are not presently indicted for, or otherwise criminally or civilly charged by a Government entity with, commission of any of these offenses enumerated in paragraph (h)(2) of this clause; and

(4) o Have, o have not, within a three-year period preceding this offer, been notified of any delinquent Federal taxes in an amount that exceeds \$3,000 for which the liability remains unsatisfied.

(i) Taxes are considered delinquent if both of the following criteria apply:

(A) *The tax liability is finally determined.* The liability is finally determined if it has been assessed. A liability is not finally determined if there is a pending administrative or judicial challenge. In the case of a judicial challenge to the liability, the liability is not finally determined until all judicial appeal rights have been exhausted.

(B) *The taxpayer is delinquent in making payment.* A taxpayer is delinquent if the taxpayer has failed to pay the tax liability when full payment was due and required. A taxpayer is not delinquent in cases where enforced collection action is precluded.

(ii) *Examples.*

(A) The taxpayer has received a statutory notice of deficiency, under I.R.C. §6212, which entitles the taxpayer to seek Tax Court review of a proposed tax deficiency. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek Tax Court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(B) The IRS has filed a notice of Federal tax lien with respect to an assessed tax liability, and the taxpayer has been issued a notice under I.R.C. §6320 entitling the taxpayer to request a hearing with the IRS Office of Appeals contesting the lien filing, and to further appeal to the Tax Court if the IRS determines to sustain the lien filing. In the course of the hearing, the taxpayer is entitled to contest the underlying tax liability because the taxpayer has had no prior opportunity to contest the liability. This is not a delinquent tax because it is not a final tax liability. Should the taxpayer seek tax court review, this will not be a final tax liability until the taxpayer has exercised all judicial appeal rights.

(C) The taxpayer has entered into an installment agreement pursuant to I.R.C. §6159. The taxpayer is making timely payments and is in full compliance with the agreement terms. The taxpayer is not delinquent because the taxpayer is not currently required to make full payment.

(D) The taxpayer has filed for bankruptcy protection. The taxpayer is not delinquent because enforced collection action is stayed under 11 U.S.C. §362 (the Bankruptcy Code).
