Time: 2.45 pm

Venue: United States Sri Lanka Fulbright Commission

Call us on **011-2564176** or **011-2564153** for reservations
Please register early as seating is limited !

Deepthi Amarasuriya received her Undergraduate Degree in Physics from the Purdue University and she has also completed two Masters Degrees in Physics and Mathematics from the Idaho State University and University of Wyoming respectively. She is currently employed as an Assistant Professor of Physics at Northwest College. She is also involved with the Multicultural Students' Club at Northwest College.

Northwest College opened in 1946 with nearly 100 full- and part-time students and three instructors who met in classrooms borrowed from the public school district. Initially called the University of Wyoming Northwest Center, it was established through an agreement with the University of Wyoming and Park County School District No. 1. University support was discontinued in 1950. In 1953 the name was changed to Northwest Community College, and in 1968 the college's tax base was expanded to include all of Park County. The name changed once more to Northwest College in 1989. Over the years, the quality of instruction matured, and a residential campus developed.
