

We recycle

For example: We have an old light bulb.

“What to do with it?”

“How can we apply the used light bulb?”

“Now we’ll show you how.”

STEP 1: Carefully peel off the contact at the base of the light bulb using needle-nose pliers. Lightly tap the black glass at the base of the light bulb with a hammer (be careful + wear safety goggles). It might take a bit of practice to carefully crack this black glass.

STEP 2: Remove the inner wires of the light bulb (use the needle-nose pliers or Allen wrench).

STEP 3: Glue legs

STEP 4: Make a garden inside the bulb.

Enjoy your garden inside the bulb in the high-tech.
