The United States Antarctic Program

Without interruption since 1956, Americans have been studying the Antarctic and its interactions with the rest of the planet. These investigators and supporting personnel make up the U.S. Antarctic Program, which carries forward the Nation's goals of supporting the Antarctic Treaty, fostering cooperative research with other nations, protecting the Antarctic environment, and developing measures to ensure only equitable and wise use of resources. The program comprises research by scientists selected from universities and other research institutions and operations and support by a contractor and other agencies of the U.S. Government. The National Science Foundation (the U.S. Government agency that promotes the progress of science) funds and manages the program. Approximately, 3,000 Americans are involved each year.

The research has three goals: to understand the region and its ecosystems; to understand its effects on (and responses to) global processes such as climate; and to use the region as a platform to study the upper atmosphere and space. Antarctica's remoteness and extreme climate make field science more expensive than in most places. Research is done in the Antarctic only when it cannot be performed at more convenient locations.

The program has three year-round research stations – McMurdo Station (on Ross Island), Amundsen-Scott Station (at the geographic south pole), and Palmer Station (on Anvers Island). In summer (the period of extensive sunlight and comparative warmth that lasts roughly October through February) additional camps are established for glaciologists, earth scientists, biologists, and others. Large, ski-equipped LC-130 airplanes, which only the United States has, provide air logistics. Air National Guard crews operate these planes. Helicopters, flown by a contractor, provide close support for many research teams. Tracked or wheeled vehicles provide transport over land and snow; small boats are used in coastal areas.

There are few places on earth where there has never been a war, where the environment is fully protected, and where scientific research has priority. A natural reserve, devoted to peace and science, this cold continent encompasses 5.4 million square miles, an area larger than the U.S. and Mexico. More than 89% is covered by an ice sheet that averages 7,090 ft thick. Precipitation in the interior averages only a few inches per year, making Antarctica one of the world’s great deserts. Yet it holds 90% of the world’s ice and- approximately 70% of the world’s fresh water.

The Antarctic Treaty provides the legal framework for the region beyond. The 12 nations listed in the preamble signed the Treaty on 1 December 1959 at Washington, D.C. It entered into force on 23 June 1961; the 12 signatories became the original 12 consultative nations.

To mark the Antarctic 2010-11 season opening, the Christchurch City Council and Antarctica New Zealand hosted a function at the Christchurch Art Gallery on the 25th September, 2010. A special church service was held at the Christchurch Cathedral 26th September to mark the start of the Antarctic season, where the chalice was blessed before it travelled south to spend the summer in the Antarctic Chapel of the Snow. SPOTLIGHT is produced monthly by the American Reference Center, Office of Public Affairs, U. S. Embassy Wellington

It offers abstracts of, and links to, current articles from U.S. publications and by U.S. authors, highlighting significant issues in international or U.S. domestic affairs. Views expressed in the items cited are those of authors and do not necessarily reflect U.S. government policies. (cont’d back page). http://newzealand.usembassy.gov/
INTERNATIONAL RELATIONS

Remarks on United States Foreign Policy by Hillary Rodham Clinton, Secretary of State at Council on Foreign Relations, Washington, DC, September 8, 2010.

Bob Gates never thought he’d be Barack Obama's defence secretary. Now, the most revolutionary Pentagon leader since Robert McNamara tells why he said yes, and what legacy he hopes to leave behind.

On July 1, 2010, the U.S. Institute of Peace organized an all-day conference entitled "Preventing Violent Conflict: Principles, Policies, and Practice." The goals of this conference were to spotlight the importance of conflict prevention, to foster productive discussions between leading scholars and distinguished practitioners, and to identify priority areas for future work on conflict prevention by the Institute and the field at large.

Of all the explanations as to why calm has prevailed in the Israeli-Lebanese arena since the end of the 2006 war, the principal one also should be cause for greatest concern: fear among the parties that the next confrontation would be far more devastating and broader in scope. None of the most directly relevant actors – Israel, Hizbollah, Syria and Iran – relishes this prospect. But the political roots of the crisis remain unaddressed, the underlying dynamics are still explosive, and miscalculations cannot be ruled out.

A discussion of likely scenarios for Iraq's al-Anbar Province over the course of the next three years.

The U.S. program of assistance to Afghanistan is intended to stabilize and strengthen the Afghan economic, social, political, and security environment so as to blunt popular support for extremist forces in the region. Since 2001, nearly $48 billion has been appropriated toward this effort. More than half of U.S. assistance—roughly 57%—has gone to the training and equipping of Afghan forces. The remainder has gone to development and humanitarian-related activities from infrastructure to private sector support, governance and democratization efforts, and counternarcotics programs.

The growth and strengthening of Afghanistan's domestic security forces is seen as key to an eventual U.S. exit, but some analysts caution that progress will remain slow.

Informal Dispute Resolution in Afghanistan by Noah Coburn & John Dempsey. USIP, August 2010.

The report discusses informal justice in Afghanistan and its relationship to state institutions. It draws on a series of pilot projects sponsored and overseen by the United States Institute of Peace (USIP) and on work by other nongovernmental organizations (NGOs), international donors, the international military, etc.

The key issues that must be resolved to ensure Afghan women’s continued political participation in the upcoming parliamentary elections on September 18, 2010 and beyond.

Sally Steenland puts recent anti-Muslim ranting into perspective and encourages Americans to look at the religion based on reality, not distortion.

The poll surveyed 3,976 people in Egypt, Saudi Arabia, Morocco, Jordan, Lebanon, and the United Arab Emirates, during the period of June 29–July 20, 2010. Among the key poll findings are: A substantial change in the assessment of President Obama, both as president of the United States and of Obama personally, remarkably stable views on the Arab-Israeli conflict and the prospects of its resolution, and a majority of the Arab public now see a nuclear-armed Iran as being better for the Middle East.

Experts answer such key questions as: What are the security implications of the transition; How can these implications be best managed?; and what's needed to achieve "success" in Iraq in the long run?

Addresses issues related to the March 7, 2010, Iraqi national election; the selection of a prime minister; and whether the promise of that election will be fulfilled. If a functioning government is not seated, will the country return to the sectarian conflicts that characterized its past? Senior Iraqi officials fear that the U.S. troop drawdown could well result in a power vacuum to be filled by insurgents.

The Nile River is the lifeline for Egyptians, the very survival of Egyptians and the existence of both modern Egypt and the biblical Egypt of the Pharaohs are intractably tied to this critical and important resource. In fact, Egyptian political, economic, social and cultural life are so intertwined with the Nile that it is not an exaggeration to say that it would be difficult to envision a viable Egyptian civilization without the Nile.

Migration to, from, and across Jordan, since the Palestinian exodus of 1948, has played a key role in the country's politics, economy, and society. These movements have several underlying, interacting patterns which are connected to regional geopolitics, the fluctuations of the oil economy in the Persian Gulf, and efforts by the kingdom's Hashemite monarchy to ensure its own stability. Jordan is a case in point for how various forms of mobility can have strong political and economic implications, both domestically and regionally.

Lebanon faces new sectarian violence, and tensions along its border with Israel threaten to boil over. To help avert conflict, Washington must eventually engage with the most powerful force in Lebanon: Hezbollah.

Overall, the U.S. effort at the International Criminal Court Review Conference in Kampala was a qualified success. While the conference adopted the Belgian amendment, creating a precedent for criminalizing the use of additional weapons as war crimes under the Rome Statute, the U.S. did succeed in minimizing the immediate risks to U.S. interests and nationals. Critically, the U.S. was successful in persuading the states parties to restrict the ICC's jurisdiction over aggression in several significant ways that should help protect U.S. interests.

A profile of the Islamist militant organization based in southern Somalia.

The aim of the Nuclear Non-Proliferation Treaty was to prevent the spread of nuclear weapons and eventually eliminate them altogether. The goal has been elusive as other nations seek and succeed in acquiring the
technology. While the treaty allows for civilian use of nuclear technology, special deals signed for national strategic reasons weaken the treaty as a whole. Many deals, instigated by the U.S. and China, escalate regional mistrust and rivalries, particularly between India and Pakistan, explains the author. While China plans to assist Pakistan's nuclear program, even Japan, a long-time critic of proliferation, may now aid India’s nuclear program as a balancing act. Spreading civilian technology today without adequate long-term safeguards on export threatens the nuclear non-proliferation regime and does nothing to secure the globe.

Since the end of the Asian financial crisis, China has drastically expanded its international presence, including in Latin America, Africa, and Central Asia. But China’s rising global power has been felt first in Southeast Asia, a region seen by some Chinese strategists as equivalent to Latin America in the U.S. Monroe Doctrine.

Rising domestic concerns in China over the increasing pressure of public opinion, the succession of the country’s leadership, and fundamental economic imbalances may have a growing effect on Beijing’s foreign policy.

Kan looks at policy issues regarding military-to-military (mil-to-mil) contacts with the People’s Republic of China (PRC) and a record of major contacts and crises since 1993. Improvements and deteriorations in overall bilateral relations have affected military contacts, which were close in 1997-1998 and 2000, but marred by the 1995-1996 Taiwan Strait crisis, mistaken NATO bombing of a PRC embassy in 1999, the EP-3 aircraft collision crisis in 2001, and aggressive naval confrontations (including in 2009).

Clarke examines the dynamics of China’s energy security dilemma and the role of the People’s Liberation Army Navy (PLAN), along with the future role in regional security. He argues that it is domestic market inefficiencies and poor management practices that pose the greatest threat to China’s energy security. And fewer Chinese energy imports are making their way to the country by sea, so that the PLAN actually has a minimal role to play. Given these realities, Chinese fears of a naval blockade that deprives it of energy supplies, and American confidence that this is a realistic strategic option in the event of hostilities are implausible.

The brief focuses on North Korean human rights and refugees.

Fact Sheet: New Executive Order Targeting Proliferation and Other Illicit Activities Related To North Korea U.S. Department of Treasury, August 30, 2010.

The Order targets the government of North Korea’s continued involvement in a wide range of proliferation and other illicit activities in defiance of UN Security Council Resolutions (UNSCRs) 1718 and 1874 and other illicit activities in defiance of international norms.

Korea’s greenhouse gas emissions almost doubled between 1990 and 2005, the highest growth rate in the OECD.

Enjoying rapid growth, India looks to make use of rich mineral holdings in its eastern states. But the rural poor and tribal people living near these deposits have been deprived of their rights and are often oppressed by corrupt officials in cahoots with developers. Though the insurgents don’t intentionally seek a global audience, escalating conflict unnerves wealthy investors abroad and rouses sympathy from human-rights groups.
Building a More Resilient Haitian State by Keith Crane et al. RAND. August 13, 2010.

Haiti's future prosperity and peace require building a more effective, resilient state. The report sifts through Haiti's many challenges and reform plans to identify the state-building priorities that are most necessary, feasible, and sustainable. Monograph Note: 209p. Research Brief 3p.

POLITICS / ELECTIONS

The Republican Party’s prospects for the midterm elections look much better than they did four years ago at this time, while the Democrats’ look much worse. Voter preferences for the upcoming congressional elections remain closely divided (45% support the Democratic candidate or lean Democratic, while 44% favor the Republican or lean Republican). In polling conducted in August-September 2006, the Democrats held an 11-point advantage (50% to 39%). Major shifts in sentiment among key voting blocs account for the improved GOP standing in 2010. The Republicans now enjoy advantages among typically loyal voting blocs that wavered in 2006, notably men and whites, says the report.
Muslims Give Obama Highest Job Approval: Mormons, Lowest 
Gallup, August 27, 2010.

Brookings, August 22, 2010 (findings of five indexes including “a Composite Index of Global and National Trends”).

Foreign Policy Sideline in Midterms Interview with James M. Lindsay, CFR, September 15, 2010.

TRADE / ECONOMY

In the midst of the most severe recession since the Great Depression, large increases in the federal budget deficit were inevitable and remain necessary to address the jobs crisis.

The paper argues for approaches that increase public understanding of the need for prudent spending of oil revenues in booms, and for comprehensive consideration of a range of options for using rents. Drawing on the experience of a few successful countries, it points to a number of common factors.

What are the Long-Term Economic Costs of Psychological Problems During Childhood? RAND, July 28, 2010.

The report examines the lifetime economic damages caused by childhood psychological problems.

The response of the European Union (EU) to the 2007-2009 financial crisis and the regulatory changes the EU has made or is planning to make.

The report catalogs a decade of serious oil spills, fires, leaks and loss of life over the last decade. From 2000 to 2010, the oil and gas industry accounted for hundreds of deaths, explosions, fires, seeps, and spills as well as habitat and wildlife destruction in the United States. These disasters demonstrate that the BP incident is not merely an accident but an industry pattern that places profit ahead of communities, local economies, and the environment.

Gainful employment rule pushes the Education Department into a new role, using network orchestration to improve quality and value in higher education.

Improving the economic situation of unmarried women will help the national economy overall. The authors suggest that policymakers focus on policies that will increase unmarried women’s wages and spending potential, reduce their debt and increase their wealth, and improve the lives and futures of their children.

Global oil markets were roiled by sharp price swings in 2008, and economists are still divided over the reasons for the unusual volatility. Those emphasizing fundamentals point to inelastic supply and demand curves, while others view the phenomenon mostly as a result of financial investors flocking to commodity markets. The authors look at the strength of these competing hypotheses.
**Financing the U.S. Trade Deficit** by James K. Jackson. *CRS, June 22, 2010.*

The U.S. merchandise trade deficit is a part of the overall U.S. balance of payments, a summary statement of all economic transactions between the residents of the United States and the rest of the world, during a given period of time. Jackson provides an overview of the U.S. balance of payments, an explanation of the broader role of capital flows in the U.S. economy, an explanation of how the country finances its trade deficit or a trade surplus, and the implications for Congress and the country of the large inflows of capital from abroad.

**Foreign Investment in U.S. Securities** by James K. Jackson. *CRS, June 22, 2010.*

Foreign capital inflows are playing an important role in the U.S. economy by bridging the gap between domestic supplies of and demand for capital. In 2008, as the financial crisis and global economic downturn unfolded, foreign investors looked to U.S. Treasury securities as a “safe haven” investment. In 2009, foreign capital inflows continued to drop as private investors sharply retrenched, while official purchases of U.S. Treasury securities by foreign governments rose sharply. Foreign investors now hold more than 50% of the publicly held and traded U.S. Treasury securities. The large foreign accumulation of U.S. securities has spurred some observers to argue that this large foreign presence in U.S. financial markets increases the risk of a financial crisis, whether as a result of the uncoordinated actions of market participants or by a coordinated withdrawal from U.S. financial markets by foreign investors for economic or political reasons.

**ENVIRONMENT & ENERGY**

Research shows that helping low-income families move to neighborhoods that are rich in opportunity - places with safe streets, high-performing schools, supermarkets, parks, and proximity to jobs - can vastly improve their lives.

**State Department Releases Fifth Annual Water for the Poor Report** *U.S. Department of State,* August 16, 2010.

U.S. efforts to expand access to safe drinking water and sanitation improve water resources management and increase water productivity in developing countries.

**Are we Ready for the Big One? Texas Gulf Legislators Learn from Cuba’s Hurricane Preparedness Model** by Elizabeth Newhouse & Wayne Smith. *Center for International Policy.* July 2010.

There is a concern about the catastrophic effect of a hurricane on the giant oil spill in the Gulf of Mexico and on earthquake-shattered Haiti. In May, Wayne Smith led a delegation of four Texas Gulf Coast state legislators, whose districts include Houston, Galveston, and Brownsville, some of the state’s most hurricane-vulnerable, to examine Cuba’s hurricane preparedness and discuss ways to cooperate. Texas has an excellent early-warning system and a new and sophisticated Hurricane Response Plan. Compared to Cuba’s plan, the Texan plan focuses more on managing evacuations and their aftermath, and less on working from the ground up to prepare communities.

Effective management of water produced from coalbed methane wells in some western U.S. basins is limited by complications in the regulatory framework, not because of water quality, says this new congressionally mandated report that examines management of water extracted from coalbed methane basins in Colorado, Montana, New Mexico, North Dakota, Utah, and Wyoming.

Concerns about global wheat supplies are sparking fears that price inflation in the wheat market could lead to a food crisis akin to the one in 2008, says the author.

Kaplow revisits the question of instrument choice for the regulation of externalities in the context of climate change.

An in-depth analysis of ten climate indicators all point to a marked warming over the past three decades, with the most recent decade being the hottest on record, according to the latest of the U.S. National Atmospheric and Oceanic Administration’s annual "State of the Climate" reports.

**Expanding the Palette** by John Grossmann in *National Parks*, Summer 2010.

The U.S. National Parks are becoming more diverse in staff and in visitors, with the help of outreach programs aimed at urban-dwelling minority groups who often have limited exposure to national parks not only for economic reasons.

**SOCIETY**

An estimated 340,000 of the 4.3 million babies born in the United States in 2008 were the offspring of unauthorized immigrants, according to the analysis. It finds that nearly four-in-five (79%) of the 5.1 million children (younger than age 18) of unauthorized immigrants were born in the U.S. and so they are U.S. citizens. In total, 4 million U.S.-born children of unauthorized immigrant parents resided in the U.S. in 2009, alongside 1.1 million foreign-born children of unauthorized immigrant parents.

Nearly 1 million U.S. residents spend time volunteering abroad each year, including nearly 200,000 first- and second-generation immigrants. The report examines the role of diaspora in development policy, explaining that they often have the connections, knowledge, and personal drive to volunteer outside the framework of organized volunteer programs. As skilled migration and the number of U.S. youth with ancestors in the
developing world grow, the potential for both skilled diaspora volunteers and youth diaspora volunteers will increase.

A broad-sweeping look at international efforts to improve public health. This is part of the Global Governance Monitor, an interactive feature tracking multilateral approaches to several global challenges.

The data book offers information on statistical trends related to defined benefit retirement plans in the private sector. This new edition features a detailed article on the smaller of the agency’s two pension insurance programs, which provides financial assistance to insolvent multiemployer pension plans.

The New York City Landmarks Preservation Commission announced that it will not designate the building at 45-51 Park Place in lower Manhattan as an historic landmark. The building, which is two blocks north of Ground Zero, does not have the architectural or historic significance to merit such a designation, the Commission unanimously said. While a decision like this normally would not draw national attention, this one already has because it essentially clears the way for the owners of the property to tear down the existing structure and build an Islamic Center there. This decision is one of several in which New York City officials have taken care to treat the planned Islamic Center the same way they would treat plans for a YMCA or Jewish community center in this space. In so doing, these officials have honored core dictates of religious freedom.

There is a lack of hard data on the exact number of Medicare-eligible retirees residing in Mexico, but it is at least in the tens of thousands and is certainly rising as the baby boom generation reaches retirement. Because Medicare does not cover health services received outside the United States, these retirees must travel to the United States for health care or purchase alternative coverage for health services received in Mexico. There are several arguments for extending Medicare to Mexico — that is, allowing Medicare-eligible beneficiaries to receive their Medicare benefits in Mexico.

Global donor support for the fight against HIV has flat-lined, while the total cost of treatment continues to rise. According to United Nations Joint Programme on HIV/AIDS (UNAIDS), in 2009 the combined G8 donors' disbursements for HIV were $7.6 billion, compared to the 2008 level of $7.7 billion.

After decades of narrowing, the achievement gap between black and white school children widened in the 1990s, a period when the labor market rewards for education were increasing. This presents an important puzzle for economists. Fryer investigates the extent to which economic models of segregation, information-based discrimination, peer dynamics, and identity can explain this puzzle.

Fourteen million children live in poor families, that is, families with income below the federal poverty level, which is $22,050 a year for a family of four in 2009. There is a wide body of research documenting the importance of family income for children’s health and well-being. Yet, research suggests that families with income twice the poverty threshold experience as many material hardships as poor families, such as food insecurity, inadequate housing, and insufficient health care. These findings are alarming and underscore the degree to which income-based measures of impoverishment mask experiences with material deprivation that are widespread and transcend the standard thresholds that define poverty.
HEALTH

Obesity is a costly condition that can reduce quality of life and increases the risk for many serious chronic diseases and premature death. The U.S. Surgeon General issued the Call to Action to Prevent and Decrease Overweight and Obesity in 2001, and in 2007, no state had met the Healthy People 2010 objective to reduce obesity prevalence among adults to 15%. Overall self-reported obesity prevalence in the U.S. was 26.7%. Non-Hispanic blacks (36.8%), Hispanics (30.7%), those who did not graduate from high school (32.9%), and persons aged 50--59 years (31.1%) and 60--69 years (30.9%) were disproportionately affected. By state, obesity prevalence ranged from 18.6% in Colorado to 34.4% in Mississippi; only Colorado and the District of Columbia (19.7%) had prevalence of <20%; nine states had prevalence of ≥30%.

How have rising health care costs affected household budgets? That question was raised many times before the passage of the Affordable Care Act, whose goal is to make health care more affordable for American families. This analysis of Consumer Expenditure Survey (CE) data from the 1998, 2003, and 2008 Interview Surveys provides a picture of nominal out-of-pocket health care spending among households categorized by the age of the reference person.

EDUCATION

**Education and Conflict in Haiti: Rebuilding the Education Sector After the 2010 Earthquake** by Ketty Luzincourt & Jennifer Gulbrandson. USIP, August 2010.

The massive earthquake of January 2010 devastated almost every aspect of Haitian society, but it also presented an excellent opportunity to address the problems of the largely dysfunctional education sector.

The study reviews a critical analysis of one study that appears to show remarkable results of charter school education, and points to other studies that would call into question the broad claims of success by charter school advocates.

**Early Education Programs and Children of Immigrants: Learning Each Other’s Language** by Hannah Matthews & Danielle Ewen. Urban Institute, August 31, 2010. 22p.

Children from immigrant families are the fastest growing group of children in the United States. High-quality child care and early education opportunities will be critical to these children's success in school and in life. Yet, the early experiences of children in immigrant families are as diverse and varied as immigrant families themselves. The authors discusses state and local solutions to improving access for immigrant families and specific strategies and collaborations among providers, policymakers, and immigrant-serving organizations.

BUSINESS

A review of attitudes about jobs and work.

**Most “Re-employed” Workers Say They Are Overqualified for Their New Job** Pew Research Center, September 2, 2010. 10p.

The Great Recession has been a financial and emotional roller coaster ride for the re-employed.

The U.S. national debate on export policies tends to focus exclusively on exchange rates and trade agreements. The authors call upon federal leaders to also consider what exporting regions need in order to succeed. This involves rationalizing infrastructure spending, boosting innovation, and studying the efforts of the most successful metropolitan area exporters, such as Wichita, Kansas and Portland, Oregon.

**100 Days of Gushing Oil: Eight Things to Know about How the Media Covered the Gulf Disaster** Pew Project for Excellence in Journalism, August 25, 2010. 23p.

**Advancing New Media Research** U.S. Institute of Peace, September 2010. 8p.

**SCIENCE**

Since the completion of the human genome project in 2003, there has been a surge of investment and discovery in both the gene sequencing and synthetic biology sectors of biotechnology. While the information contained in genome databases is not inherently dangerous, it can be used for destructive purposes. With synthesis technology becoming less expensive, more accurate, and faster every year, it is foreseeable that by 2020 malefactors will have the ability to manipulate genomes in order to engineer new bioterrorism weapons. The authors discuss the possibilities.

**COMMUNICATIONS & INFORMATION TECHNOLOGY**

**Net Neutrality or Internet Toll Booths?** Brookings – video

Google and Verizon recently announced a “legislative framework” for Internet regulation that some critics say could put an end to net neutrality, or the openness of the Internet, by creating a two-tiered data system. Senior Fellow Darrell West takes a look at net neutrality and the Google-Verizon plan.

Technology use among foreign-born Latinos continues to lag significantly behind that of their U.S.-born counterparts. The nativity differences are especially pronounced when it comes to internet use. While 85% of native-born Latinos ages 16 and older go online, only about half (51%) of foreign-born Latinos do so. When it comes to cell phones, 80% of native-born Latinos use one, compared with 72% of the foreign born.
Some resources which may be of interest:

**Older Adults and Social Media** by Mary Madden. *Pew Internet & American Life Project*, August 27’10. 13p.

Adults make just as many calls, but text less often than teens. Americans say their mobile phones make them feel safer and more connected, but are irritated by cell intrusions and rudeness by other users.

**THE ARTS & CULTURE**

During the past decade, arts advocates have relied on an instrumental approach to the benefits of the arts. This report evaluates these arguments and asserts that a new approach is needed – it should offer a more comprehensive view of how the arts create private and public value, underscore the importance of the arts’ intrinsic benefits, and link the creation of benefits to arts involvement.

**Improving Arts Education is Key to Stemming Audience Decline** by Laura Zakaras. *RAND*, 2010.

Policymakers have underestimated the critical role of arts learning in supporting a vibrant nonprofit cultural sector. And despite decades of effort to make high-quality works of art available to Americans, Zakaras says demand for the arts has failed to keep pace with supply. Audiences for classical music, jazz, opera, theater and the visual arts have all declined, and public funding has focused on building supply and expanding arts access, while it has neglected cultivation of the (especially young) audiences capable of appreciating the arts.

Public-private partnerships for parks are proliferating across the country, helping to create new and refurbished parks, greenways, trails and other community assets - often in the face of municipal budget constraints. This report, based on lessons from Wallace’s Urban Parks Initiative, offers guidance to practitioners, managers and innovators in the parks field in planning, developing and assessing partnerships between public agencies and nonprofit organizations to build, renovate and operate urban parks.

Some South Asian Muslim youth in British cities, seeking art and music that reflect their own alienation, embrace the hip-hop and rap of urban black America. Styles and messages converge, as young Muslim teens blend cultural and political expression with their Islamic faith, explains the author. Islamic fundamentalists warn against any music at all, let alone provocative hip-hop. Budding interest in alternative, radical music could be a fad – or signal yet a new alliance between Muslim and leftist social-justice values. There’s power in demographics: Some 70% of the world’s Muslim population is under the age of 30 – and they could eventually transform mainstream Islam, including the religion’s goals, activism and reputation.
