I am Tryness Moyosvi. I was born 33 years ago. I am a mother of two boys and ex-}
pecting my third child. I am delighted to have received these three nets for my fami-
ly. They are going to be so happy. Previously I received only one net for my last born 
son who at that time was under five years old. The net was not easy to use. It was 
rectangular, a design for beds but we don’t have a bed. I have had cerebral 
malaria twice. The first time I had it when my first born was five months old. I was 
admitted for three weeks at All Souls Mis-

"A malaria free community"

sion Hospital. In August 2012, I had an-
other episode of malaria and was in hos-
pital for two weeks. My whole family also 
tested positive for malaria and were 
treated.

When I went to register my pregnancy at 
the clinic the nurse gave me a dose of SP 
which I took in her presence. She told me 
that as a pregnant woman I am more vulnerable to malaria and therefore in addi-
tion to the dose I must sleep under the net everyday.

I am delighted that we are now receiving enough nets and they have a right shape 
too. My whole family is protected this time. I do not want to get malaria again. I 
wish to raise a happy family that is free from malaria.

My name is Sarah Chawatama. I am a 
teacher at Mushimbo Primary School. 
Before net distribution in our area, most 
pupils would get malaria especially dur-
ing the rainy season resulting in them 
missing classes and at times examina-
tions. With the introduction of the treat-
ed nets I have faith that none of my pu-
pils will suffer from malaria. The distribu-
tion method used ensures that everyone 
has access to a net. I am going to edu-
cate my pupils on the benefits of consist-
ently sleeping under the nets so that they 
can be protected from malaria. As a 
teacher I am glad that my pupils can now enjoy their classes without disruptions. We 
appreciate this timely intervention and thank all who have gone out their way to en-
sure we get these nets.
